Team 6 Repository Access Information

PU Network

Jaime Ortega, Stephen Kercher, Zhixuan Yu, Fangfang Sun, Di Pan

In order to access our repository, you would need to have Github account, as Git is what we are using for our repository. We, as a group, are using Source Tree which is a useful UI and client for Git operations such as committing, pushing, checkout, branching, etc. This simplifies the process for us as we do not need to type in long lines of code in order to commit a change, since the code is built into the client. The way that Source Tree is set up is that each machine has a local copy of every file, but any official changes are monitored through the copy stored on Github. Also, Source Tree gives a visual of what changes were made from one version of a document to the next, who is currently on a branch, who has what file checked out, etc.
